

Astronomical and digital clocks

Functional solutions
for building automation
and lighting control systems

- operating modes: daily, weekly, annual (with preset memory backup)
- 80 editable work algorithms
- easy to switch between devices at any time
- possible independent operation of two outputs in a two-channel version

RAT-TPA1B

Astronomical digital clock:

- 52 programs
- holiday mode
- switching on and off the lightning or other electrical receivers in accordance to sunset and sunrise
- option to program a night break

RDT-TPA2

Multifunction astronomical digital clock:

- 80 programs (astronomical and annual)
- holiday mode, random mode
- switching on and off the lightning or other electrical receivers in accordance to sunset and sunrise

RWT-TPD1

Weekly digital clock:

- 52 programs, pulse program
- holiday mode
- switching on and off pumps, air conditioning, heating, lights and school or factory bells
- 1 PWM type output
